PROBLEM STATEMENT

Good Food Is Wasted While People Go Hungry Nearby

14.1M

tonnes of food wasted by Bangladeshi households every year

Source: UNEP Food Waste Index Report, 2024

~36%

of Bangladesh's population faces food insecurity

Source: World Food Programme (WFP)

Note: That's household waste alone—before counting what restaurants, hotels and grocery stores throw out daily.

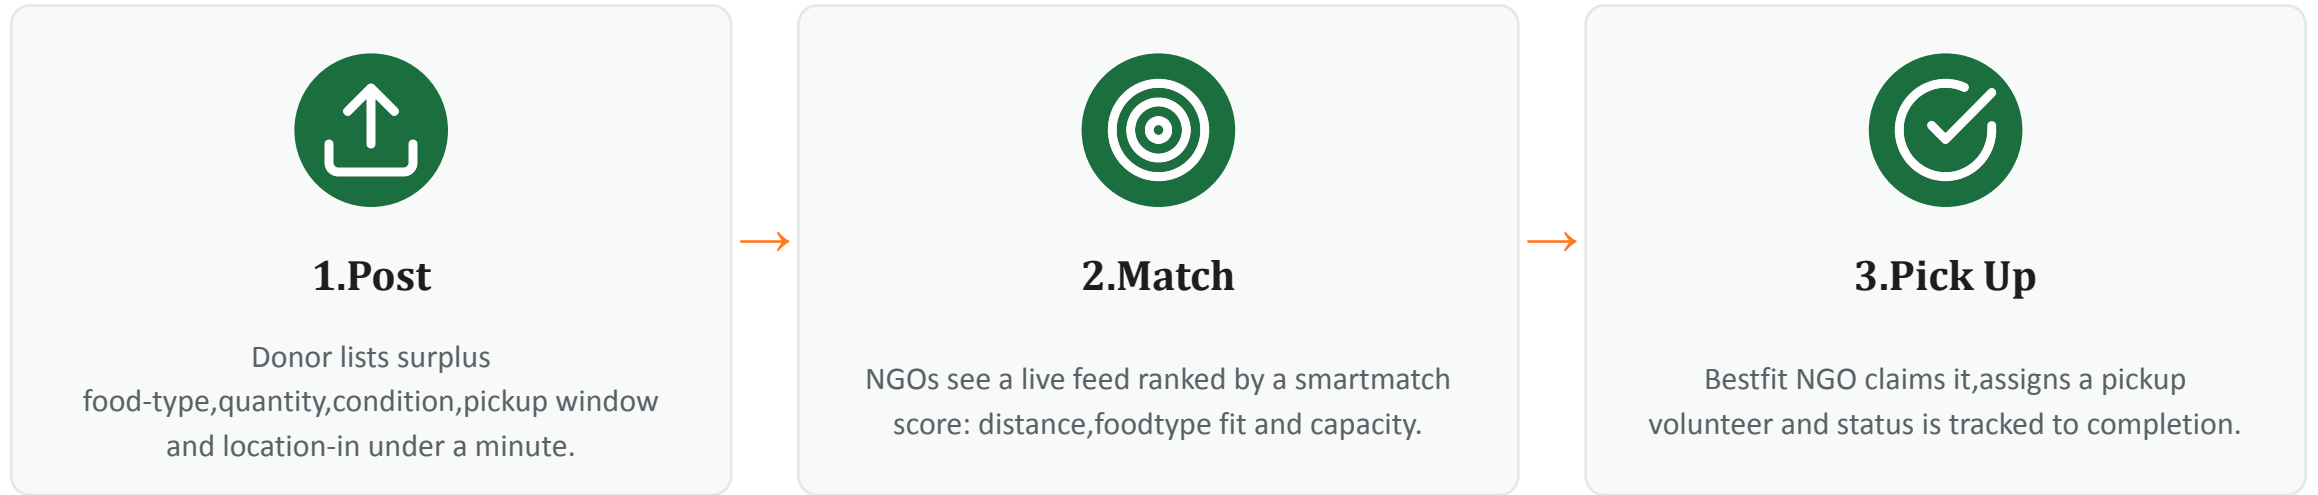

Hunger close by

Surplus everywhere

PROPOSED SOLUTION & USP

A RealTime Marketplace for Surplus Food

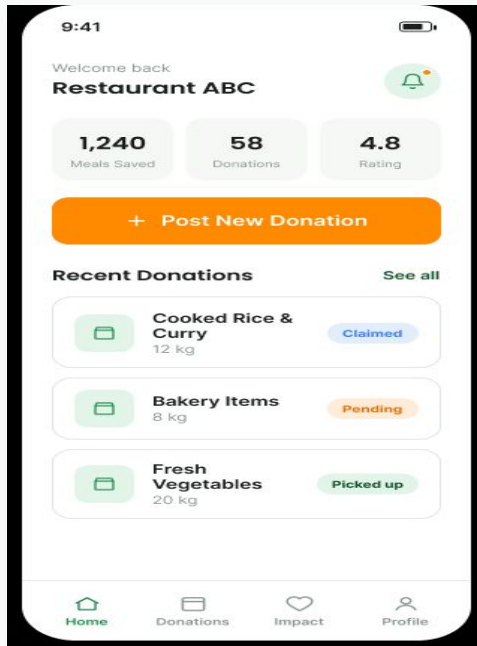

What makes it different!!!

A smartmatch score-not firstcomefirstserved-ranks every donation by distance,foodtype fit and an NGO's intake capacity so the most relevant match claims it first and fewer trips go to waste.

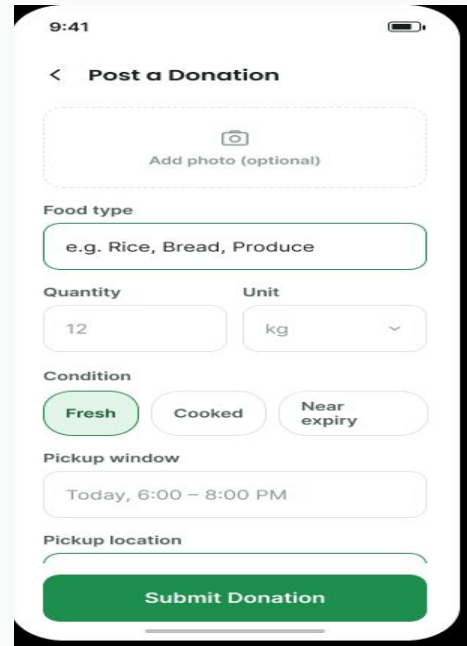

PRODUCT, NOT JUST A PITCH

The App Is Already Built and Working

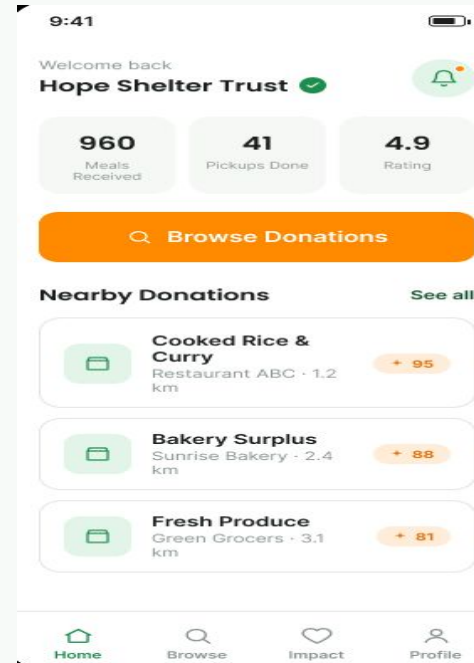

Donor Dashboard

Post donations, track status at a glance

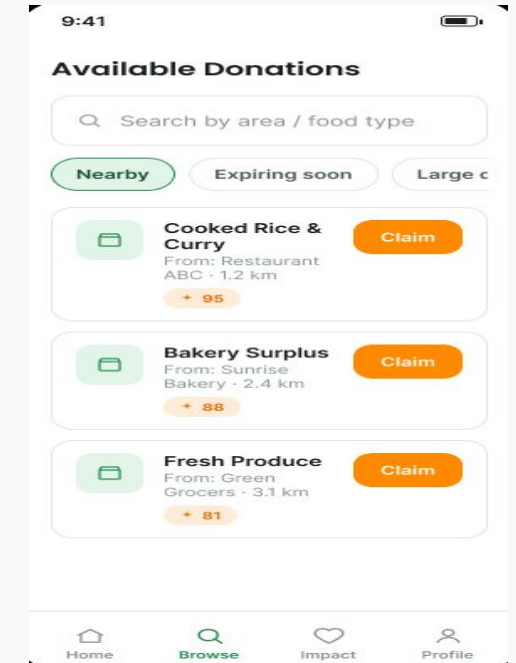

Post a Donation

Type, quantity, condition, pickup window

NGO Dashboard

Live nearby donations, ranked by match

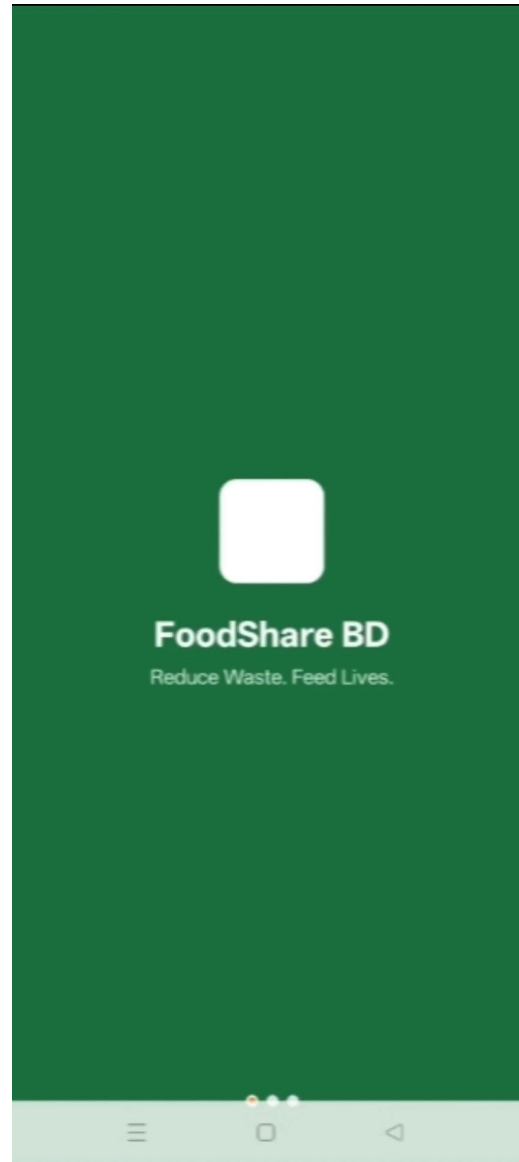

Claim a Donation

Search, filter and claim in one tap

Note: screenshot from the working build-donor and NGO sides both fully functional today.

ACTUAL APP

How it works!

How It Works Under the Hood

Workflow:

- A donor posts surplus food with a pickup window and location.
- The matching engine ranks it for every nearby NGO by distance, foodtype fit and intake capacity.
- The best-fit NGO claims it and the status-Pending, Claimed, Picked Up-updates live on both sides.

Built Today and What Comes Next

Built Today

Native Android app (written in Java+XML)

15+ screens across donor and NGO flows

Full status tracking: Pending → Claimed → Picked Up

Coming Next

Cloud backend for multidevice sync

Push notifications for new nearby donations

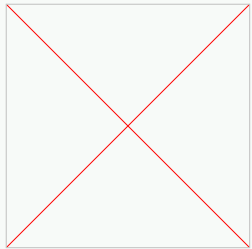

Live GPS-based distance matching

Two Sides of One Underserved Market

Donors

Where the surplus comes from

Restaurants

Hotels

Bakeries

- Grocery stores & event caterers
- Households with routine surplus

Recipients

Where the need already exists (informed)

NGOs

Registered charities

- Volunteer distribution networks
- Shelters & community kitchens

Today, most matching happens informally-phone calls, WhatsApp groups, personal contacts.

FoodShare BD replaces that with a live, ranked, trackable feed-built for how fast surplus food actually needs to move.

Built to Last, Designed to Scale

Freemium Core

Free for NGOs and small donors,
always-the model that reduces the
most waste can't have a price
barrier.

Premium for Business

Paid tier for restaurant chains &
retailers: CSR impact
reports, analytics and priority listing.

Scales City by City

The two-sided marketplace model
doesn't need rebuilding to
expand-just onboarding new donors
and NGOs.

Partnership potential: corporate CSR programs, food safety certifiers and municipal sustainability initiatives.

SWOT Analysis

HELPFUL

HARMFUL

INTERNAL

Strengths

- Already a working Android app-donor & NGO sides both functional
- Smart-match engine: ranks by distance, food type, and capacity
- Free for NGOs — removes the biggest adoption barrier
- Full status tracking from posted to picked up

Weaknesses

- No cloud backend yet-->data doesn't sync across devices
- Distance matching is simulated, not live GPS -yet
- No donor / NGO verification system in place yet
- Unproven — no real-world pilot data so far

EXTERNAL

Opportunities

- 14.1M tonnes of household food wasted yearly in Bangladesh (UNEP)
- No dominant local app doing real-time donor-NGO matching
- Rising corporate CSR demand for measurable impact
- Model could extend beyond food to other donated goods

Threats

- Global players (Too Good To Go, Olio) could localize and compete
- Two-sided marketplace problem — needs both sides at once
- Food-safety liability in redistributing donated food
- Impact depends on NGOs having volunteers & transport

IMPACT & ROADMAP

From Working App to Real World Pilot

IMPACT WE'LL TRACK

Kilograms of surplus food rescued per month

Meals redirected to NGOs instead of landfills

Donor CSR value: a measurable sustainability story

ROADMAP

Phase 1-Done

Working Android app: donor + NGO flows, smart matching, claim tracking

Phase 2

Cloud backend, push notifications, live GPS matching

Phase 3

Pilot with real restaurants and NGO partners

Phase 4

Scale to additional cities across Bangladesh

Reduce Waste. Feed Lives.
